

Vortex Class
short-range pod

 **LOCKHEED-WAVERLY**
SPACE SYSTEMS

Lockheed-Waverly's Vortex class short-range pod is just as versatile as its extended-distance pods only with a shorter range. Designed to accompany terraforming expeditions, the Vortex class thrives in unusual planetary atmospheres.

Unique Onboard Science Lab

The onboard science lab, fully stocked engineering bay and extended cargo bay gives confidence to expeditionary teams when exploring unknown planets. Redundant equipment and secondary systems mean that a small team can operate on extended missions without a support crew back on the mothership.

Comfortable Crew Quarters

Its roomy crew quarters, mess hall and head with a full steam bath ensure that all that the

crew will feel at home – even the unpaid intern.

The Bridge Has It All

A four-seat bridge with readouts from all points of the pod gives the Captain and pilot complete confidence as they explore new worlds.

Don't Leave Earth Without It

No colony ship should be without a Vortex class short-range pod. Its combination of features will make it an asset to any terraforming operation.
